

Team,

I need to address two process gaps that are creating avoidable repeat work, customer complaints, and unnecessary dispatch activity. Effective immediately, the following expectations must be followed without exception:

1. “Not Home” Closures – Dispatch Contact Required

If you are closing a job as “Not Home,” you are required to **call Dispatch and speak with them before closing the ticket.**

If a customer calls in stating you did not show up—and there is no Dispatch confirmation—you will be sent back out. There are no exceptions to this.

Bottom line:

Do not close a job as “Not Home” unless you have **spoken to Dispatch.**

2. NRBY Submission – Sequence Matters

When OSP is required:

- **Submit the NRBY request first**
- Then document in your job notes that it has been submitted
- Set the proper expectation with the customer advising that OSP will be out the next day. The only exception to this would be Sundays. Letting the customer know that OSP would be next day and that it is an all-day window, no exceptions to this, no sooner time frames. This helps alleviate the unnecessary ETA & Where’s my Tech escalation tickets submitted by the call center.

Noting that an NRBY was submitted without actually submitting it creates confusion, delays, and drives customer calls stating OSP did not show up. We can verify whether an NRBY was submitted.

Bottom line:

Do not document an NRBY unless it has already been submitted.

Ensure that you set the proper expectations with the customer on when OSP will be out and ensure they’re aware that it’s an all day timeframe. Most often they’re not required to be present.

These are basic process expectations. Failure to follow them results in repeat visits, poor customer experience, and added workload for Dispatch.

We will be monitoring compliance closely.

Thank you.
